
a
dotted: $n = 1/s$
dashed: $n = 2(\nu_r/\Gamma_n)^2/s$
master equation, $s = 0.1$, $N = 400$
fit $n^{-2.34}$ $(30 \le n \le 200)$
$n^{-1/h}$, $h = 0.40$
$P(n)$, case A
Fock state n
b
B, $b_p = 1/2$
A, $b_p = 5/6$
A, $b_p = 1/2$
$\mu > 1$: normalisable
$\mu > 2$: $\langle n \rangle$ finite
$\mu > 3$: Var(n) finite
tail exponent $\mu = 1/h$, $P(n) \propto n^{-\mu}$
$h = \kappa\alpha\eta_{\mathrm{sp}}^2$ (recoil quanta per removed phonon)
